

# Android Math Apps

(The information for this handout was taken from this site. <http://bit.ly/1ZGIDUK> Credit to Ken East)

## Kids Numbers and Math

- Kids Numbers and Math teaches children about numbers and basic mathematical operations in an easy and fun manner. Your kid will be able to easily learn math with this app because numbers are spoken aloud in kid-friendly English, making them easy to understand. If your child is a fast learner, Kids Numbers and Math also has advanced exercises to keep your child entertained. Set the number ranges depending on your kid's progress and rest assured that your child will be having fun with numbers.

## Math Workout

- This app gives your brain its daily dose of mental exercise by testing your mental math once a day. It gives you math drills which are designed to enhance your mental arithmetic. There's no reason to let your math skills atrophy; whether you're at work or at home, work that brain and see just how well you can solve these exercises. It also allows you to track your progress with charts of your past performances.

## Einstein Math Academy.

- This app provides edutainment for all ages so mom, dad, and child can learn and practice their Math in a fun way. It's basically a game where you need to find equations that work. It has four different game modes to choose from, namely, Kids, Timeless, Quick and Survival.

## Brain Exerciser

- This is designed for the purpose of giving your brain some exercise. The app has three 3 games that you can play to refresh your mathematical skills. There is the Add like Mad game where you need to tap on the squares to add numbers so that they become equal to the value at the top before the time runs out. There is also the Number Breaker where you need to destroy all the digits, and the Balloon Solver where you need solve for the right answer to pop the balloon before the time runs out.

### Mental Math

- Mental Math teaches you how to master mental math through games. The app gives you useful tips for getting around difficult math problems. It also has times table training to help you sharpen your multiplication skills, as well as training in the four arithmetic operations with three levels of difficulty. And, to help you better improve your mental math, it has a “hide question” mode to train you to remember numbers in mind.

### Falling Math

- This is a simple game to help you enhance your mathematical skill, and it is also very effective. To play the game, you need to simply touch the right answer from the falling choices before it drops off the screen. You need to be super fast in your calculation to keep up with the falling answers. The fun part is that if you get the correct answer, the choices will fall faster for the next problem.

### Mad Math 4 Kids.

- Mad Math 4 Kids helps your child learn basic arithmetic operations through a game. To play the game, a subtraction or addition equation with three numbers should be found and then solved. Once the equation is solved, another one replaces it. Your goal in Mad Math 4 Kids is to solve as many equations as possible within the given time limit.

### Math Ninja

- This is another app that can help improve the mathematical skills of your child, specifically in using different math operations and solving complicated problems. Math Ninja does this through different mathematical games. It has 15 games to practice the different mathematical operations at 10 levels of difficulty.

### Arithmetics for Kids

- This is a simple math game to help your child start learning mathematical operations. It is both an educational and entertaining game and your child will enjoy playing without feeling the pressure of learning math. To play the game, three adjacent numbers should be connected using subtraction or addition so that their sum will equal the target number. It's very easy but the real challenge for your child is that he or she must solve as many problems as possible before time runs out.
